

RWS IP Monitor

Monitoring the patent landscape for the developments that matter to you.

RWS IP Monitor

The intellectual property landscape is vast and ever-changing, which can make keeping up to date with developments both time consuming and complex.

That's why we developed RWS IP Monitor. Our IP Analysts will track patent activity, new technologies, designs and innovations in your areas of interest.

We can customize the investigation to target specific applicants, inventors, classifications or key words, and create tailored alert profiles so you never miss an update.

As a world leader in patent research, RWS has been providing IP monitoring solutions for more than six decades. Now, building on our already-unmatched experience, we have introduced significant enhancements to the service.

IP Monitor is now delivered via our sophisticated research platform, AOP Connect. This gives you complete oversight and control of your results, enabling you to view the information you need quickly and efficiently.

RWS: Experts You Can Trust

RWS has established itself as a trusted brand with a global reputation for technical expertise, quality and reliability. Our IP monitoring service is overseen by a team of highly-qualified analysts, who are both patent specialists and experts in their chosen fields.

ISO-Accredited Processes

Our process excellence has been developed over 60 years of IP Monitoring, with ISO 9001 accreditation first gained in 1992.

Expert Analysts

The IP monitoring process is overseen by expert analysts, experienced in creating patent search strategies.

High Quality Data

Our analysts are expert users of PatBase, the leading global patent search platform.

World Leaders in IP

RWS is the world leader in intellectual property solutions, with more than 60 years of experience in the field.

A Cutting-Edge Research Platform

Our IP monitoring service connects with our flexible, secure online reviewing platform - AOP Connect.

Common Monitoring Scenarios

Our IP Monitoring service can be customized to meet your precise requirements. Parameters can be as broad or focused as you need them to be, and can cover a range of areas, including:

Competitors

Track competitor patenting activity. Monitoring can be limited to specific technologies if preferred, depending on your requirements.

Technology Innovation

Our Analyst team will help to define a strategy that locates relevant publications in your field. Monitor by patent classes or keywords, or use our AI concept search.

Inventor Activity

Are there particular inventors of interest in your technology space? Monitor all activity by a single inventor or group of innovators.

Patent Status

Interested in tracking changes to a specific patent? Our analysts will seek out any developments and alert you accordingly.

Design

Our analyst-curated service tracks critical elements of interest. We will monitor design patents and non-patent literature for features matching your parameters.

Flexible Features

The RWS IP Monitor service has a number of flexible features that enable you to home in on the information you need. Our analysts can help you to define your initial strategy, and subsequently refine it based on initial findings.

The service combines the use of our leading IP technology platforms with data analysis performed by our in-house team. No matter how simple or complex your parameters, we will build a plan that supports your desired outcomes.

Targeted Monitoring

Our recurring IP Analyst report is based on your specific information needs.

Strategic Support

Strategy creation and ongoing refinement based on your feedback.

Status Feeds

Our agents have access to PatBase, which provides reliable data sourcing and official status feeds.

Analyst Curation

Our IP Analyst curation service is ideal for complex matters.

You Set the Frequency

Reporting is based on your frequency requirements.

Publication History

A complete publication history is available in AOP Connect, giving you the searchable data you need, when you need it.

Trend Data

Analyze the big picture with up-to-date trend data.

Leading the way in IP monitoring

Quality and value

Simplify and streamline
